Iceland and the Northern Lights

Chasing The Light

A remote Nordic island brimming with legendary volcanoes, glacier-cut fjords, rainbow-laden waterfalls and geysers may sound like the makings of Viking folklore, yet in Iceland's "Land of Fire and Ice," these fantastical, otherworldly scenes are as real as the blue-green auras that dance across the Arctic sky. Experience the natural beauty of this sparsely populated part of the world during an amazing, nine-day, eight-night journey specially timed for the optimal viewing of the *aurora borealis*, otherwise known as the Northern Lights.

From cosmopolitan Reykjavík to the harbor town of Siglufjörður and beyond, discover life in this egalitarian nation known for its small population, high standard of living and penchant for books, humor and fresh air. Explore the UNESCO World Heritage site of Þingvellir — where the North American and Eurasian tectonic plates meet, and where the nation's first open-air assembly was established in 930, lasting until 1798. As your itinerary unfolds, learn about Viking settlers, the herring industry and geothermal energy practices — all while enjoying guided evening excursions where we'll look to the heavens for a light show like no other.

World of Natural Wonder

The Northern Lights illuminate "dark castle" lava formations at Dimmuborgir

Experience the otherworldly beauty of the naturally occurring *aurora borealis*, more commonly known as the Northern Lights. This phenomenon is caused when streams of plasma escape the sun's surface and disrupt Earth's magnetic field, resulting in ribbons of color shimmering in the night sky above the planet's polar regions. Witness this along with other unparalleled geological riches of Iceland — home to 4,500 square miles of glaciers, 30 active volcanic systems, 800 hot springs and more than 10,000 waterfalls.
